

PROJECT REQUIREMENT

Workforce Management Solution for Police

Live Wall (Force Tracking) · Personnel Roster System · Arsenal & Inventory Management

PROJECT CONTACT

Alok Singh, DGP

PREPARED BY

Veritech Inc. / SkillSanta Pvt. Ltd.

DATE

July 12, 2026

Project Overview

A command-level workforce management system for the Police department, built as three connected modules — giving leadership visibility into where forces are deployed, who those forces are, and what equipment they carry.

01

Live Wall

Real-time, map-based tracking of IPS officers, unit leads, vehicles, and individual personnel.

02

Personnel Roster

Health-driven mobility data feeds an AI engine that generates the roster automatically.

03

Arsenal Management

Tracking of weapons and equipment assignment, mapped to an Excel-based register.

MODULE 1

Live Wall — Force Tracking

Objective

Give command staff a live, map-based view of every deployed asset so leadership always knows where the force is positioned.

Tracking Model

Cluster-mapping approach: GPS data from every tracked point is plotted on Google Maps (or an indigenous alternative) and color-coded by role and rank.

Access & Scale

- Centralized command view
- Station-level login
- Department-wise login

MAP COLOR-CODE LOGIC

IPS Officer

Highest visual priority marker

Unit / Team Lead

Linked to vehicle marker

Vehicle

Own marker, tied to unit lead

Individual Personnel

Sub-coded by rank: SI, Inspector, SHO, etc.
Tracked via mobile app — map flags personnel who are inactive (not transmitting).

Security Is the Central Risk

THE CONCERN

Live Wall tracks the real-time location of every officer, unit lead, and vehicle. If this data leaks, everyone's position is exposed — an operational and safety risk, not just a data-privacy one.

Treated as a first-order design constraint — not an afterthought bolted on at the end.

THE MITIGATION

Partner with Kratikal

Kratikal covers the cybersecurity requirement end-to-end for the tracking data pipeline, storage layer, and access controls across centralized, station, and department logins.

Scope & commercial terms of this engagement: open item.

Police Personnel Roster System

A roster system that goes beyond basic employee records — adding the data needed to make deployment decisions defensible and rule-based.

1

Age

Standard demographic field

2

Seniority

Used in deployment and rotation logic

3

Rank

SI, Inspector, SHO, etc. — shared with Live Wall

4

Health

Drives the Mobility Index — not a standalone field

MOBILITY INDEX

AI Engine → Auto Roster

Runs in the background; generates the roster automatically against eligibility rules.

HARD RULE, ENFORCED BY THE AI ENGINE

An employee cannot be deployed in their home location.

Roster generation checks this rule automatically — it is not a manual review step.

Arsenal / Inventory Management

Manage weapons and equipment — what exists, who it's assigned to, and who currently holds it — mapped to an Excel-based register.

01

Assign

Guns and equipment assigned to individual personnel.

02

Track Custody

Records who has actually taken possession — not just nominal assignment.

03

Reconcile in Excel

Mapped to an Excel register for reporting and reconciliation.

OPEN ITEM

Is Excel the system of record with the app writing into it, or is the app the system of record and Excel an export/reporting layer?

Proposed Member for inclusion

AG

Amit Gehlot

Sales Head

AJ

Aman Jain

Role TBD

was on Instamart India launch

UV

Udit Varshney

Role TBD

was on Instamart India launch

RG

Rahul Gill

Role TBD

Role definitions for Aman, Udit, and Rahul, and confirmation of bandwidth given the Instamart commitment, are pending.

Open Items & Next Steps

OPEN ITEMS

- Inactive-personnel detection mechanism — pending detail
- Mapping stack: Google Maps API vs. indigenous engine
- Kratikal scope and commercial terms
- Excel-to-system mapping approach for Arsenal module
- Team role assignments — Aman, Udit, Rahul
- AI scope: confirmed for roster generation — Live Wall/Arsenal unconfirmed

NEXT STEPS

- 1 Validate scope with Alok Singh (DGP); close open items
- 2 Confirm mapping technology and hosting approach
- 3 Finalize Kratikal's SOW and commercial terms
- 4 Define one shared rank/grade taxonomy across modules
- 5 Assign confirmed roles; begin design on Live Wall first
